What is claimed is:

1.   An information recording apparatus which is
characterized in that it is at least provided with: a means
for inputting data; a means for extracting an information for
discriminating a recording medium from a specific area of the
recording medium; a means for recording the inputted data in
the recording medium when the extracted information and a
predetermined information are compared, and the extracted
information is coincident to the predetermined information.

2.   The information recording apparatus written in Claim 1,
wherein the specific area is an area outside the logical
address area of a disk type recording medium.

3.   The information recording apparatus written in Claim 1
or Claim 2, wherein the data is 1 or a plurality of data
selected from static image data, moving image data, musical
composition sound data, contents, application, and the data
includes any one of data offered by an user, data previously
stored in a memory means, or data which is down-loaded
through a communication network.

4.   A recording program which is characterized in that: it
functions a computer at least as a means for extracting an
information for discriminating a recording medium from a
specific area of the recording medium, a means for recording
an inputted data by comparing the extracted information with
a predetermined information, and when the extracted
information is coincident to the predetermined information.

5.   The recording program written in Claim 4, wherein the
specific area is an area outside the logical address area of
a disk type recording medium.

6.   The recording program written in Claim 4 or Claim 5,
wherein the data is 1 or a plurality of data selected from
static image data, moving image data, musical composition
sound data, contents, application, and the data includes any
one of data offered by an user, data previously stored in a
memory means, or data which is down-loaded through a
communication network.

7.   A recording medium which is characterized in that
information for discriminating the recording medium, which is

used in a specific program, is previously recorded in a

specific area.

8.   The recording medium written in Claim 7, wherein the

specific program is a program which, referring to the

information, judges whether the inputted data is recorded.

9.   The recording medium written in Claim 7 or Claim 8,

wherein the specific area is an area outside the logical

address area of a disk type recording medium.
